Time365 App

Release Note

Mobile App and Backend Updates

Product	Time365 App
Document	Release Note
Release Scope	Mobile App & Backend
Version	2.2.6(253)

1. Release Summary

Tiem365 App introduces new security enhancements, user experience improvements, and performance optimizations to deliver a more secure and seamless attendance experience.

2. Mobile Changes

2.1. Customizable Notifications

You can now manage your notification preferences directly from the web portal. Choose which notifications you want to receive for a more personalized and cleaner experience.

2.2. Free Parking Punch Feature

A new Parking Punch button is now available at no additional cost. The feature can be easily enabled or disabled and managed from the web portal. We have also improved its functionality to provide smoother and more reliable experience.

2.3. Smart Parking Punch Timer

The Parking Punch button now displays a clear countdown timer. You can easily see how much time is remaining before the button becomes available and when it will be disabled, making the feature easier and more convenient to use.

2.4. UI & Experience

- Added Dark Mode support for a more comfortable viewing experience.
- Enhanced the overall app UI with a cleaner and more consistent design.
- Improved the oval UI elements across the app for a smoother visual experience.

2.5. Performance & Stability

- Improved overall app performance and stability.
- Fixed various minor bugs and UI issues for a smoother experience.

3. Backend Changes

3.1. New Option added

Attendance type option is added when choosing parking setting
